DETAILED ACTION

1. Claims 1-4 are presented for examination.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-2 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Connery et al, U.S. Patent Number 6,311,276, in view of Angelo et al, U.S. Patent Number 6,418,533.
- 4. Connery et al and Angelo et al were cited in the previous office action.
- 5. As per claim 1, Connery et al taught the invention substantially as claimed including a data processing network (col.4, lines 31-52) comprising:
 - a. A server computer system (col.4, lines 46-49);
 - b. A portable client computer system capable of communicating with said server computer system (col.1, lines 23-27, col.4, lines 31-38, 43-47, col.5, lines 16-18); and
 - c. A control means, connected to said server computer system, for issuing a wake-up request to said portable client computer system via a connection to switch said portable client computer system to a normal operating state from a low-power or off

Application/Control Number: 09/477,389

Art Unit: 2154

state (col.1, lines 23-27, col.3, lines 63-67, col.4, lines 53-60, col.5, lines 26-36), and for issuing a request to said portable client computer system via said connection to disable said portable client computer system (col.1, lines 28-30, col.6, lines 40-43); and

- d. A network adapter, connected to said portable client computer system, for disabling said portable client computer system from further operations in response to said request (col.1, lines 28-30).
- 6. Connery et al did not specifically teach that the communication between the server and the client is wireless and the request is issued via a wireless connection. Angelo et al taught a system able to issue requests to said portable client computer system via said connection to disable said portable client computer system (col.3, lines 9-15, col.4, lines 17-28) with a network adapter connected to said portable client computer system, for disabling said portable client computer system from further operations in response to said request (col.3, lines 8-9, 33-37, col.4, lines 28-30, col.5, lines 36-39) using a wireless communication (RF). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teachings of Connery et al and Angelo et al and replace the network to wireless connections, such as wireless LAN, to Connery et al's system because Angelo et al's teaching of using wireless connections enable the system to provide remote disabling to wireless devices such as cellular phones (col.5, lines 56-59). Furthermore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine the teaching of Connery et al and

Application/Control Number: 09/477,389

Art Unit: 2154

Angelo et al because Angelo et al's teaching of securing portable devices help to secure Connery et al's system and files after the portable device has been lost or stolen (col.3, lines 59-61).

- 7. As per claim 2, Connery et al and Angelo et al taught the invention substantially as claimed in claim 1. Angelo et al further taught wherein the wireless connection is a satellite data link (col.3, lines 55-57, col.4, lines 24-29).
- 8. As per claim 4, Connery et al and Angelo et al taught the invention substantially as claimed in claim 1. Connery et al further taught that the wherein the wake-up request includes a Wake-on-LAN frame (col.2, lines 3-6, col.5, lines 26-32).
- 9. Claim 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Connery et al, U.S. Patent Number 6,311,276, and Angelo et al, U.S. Patent Number 6,418,533, as applied to claims 1-2 and 4 above, and further in view of Spicer, U.S. Patent Number 6,097,760.
- 10. Spicer was cited in the previous office action.
- 11. As per claim 3, Connery et al and Angelo et al taught the invention substantially as claimed in claim 1. They did not specifically teach that the wireless connection is a DECT link. Spicer taught a data communication system using a DECT link as the wireless connection between the controlling system and the client computer system (col.1, lines 51-58, col.2, lines 12-14, 57-63, col.3, lines 61-65). It would have been obvious to a person of ordinary skill in the

Application/Control Number: 09/477,389

Art Unit: 2154

art at the time the invention was made to combine the teachings of Connery et al, Angelo et al

and Spicer because Spicer's teaching of using DECT link as the wireless connection enables

Connery et al and Angelo et al's system for use in a radio in a local loop system.

Conclusion

12. A shortened statutory period for reply to this Office action is set to expire THREE

MONTHS from the mailing date of this action.

13. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Kenny Lin whose telephone number is (703)305-0438. The

examiner can normally be reached on 8 AM to 5 PM Tuesday to Friday and every other Monday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Meng-Ai An can be reached on (703)305-9678. Additionally, the fax numbers for

Group 2100 are as follows:

Official Responses:

(703) 872-9306

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is (703)305-6121.
